Warning: Use of Owen equipment contrary to manufacturer's specifications or operating instructions may result in property damage, serious injury or fatality. If you are not trained in the handling and use of explosive devices, do not attempt to use or assemble any Owen perforating systems or Owen firing devices.

Owen Oil Tools pre-assembles its tools as per the field operating manual. It is the responsibility of the purchaser to insure that this tool is assembled as required, prior to use.

This technology is regulated by and, if exported, was exported from the United States in accordance with the Export Administration Regulations (EAR). Diversion contrary to U.S. law is prohibited. Export and/or re-export of this technology may require issuance of a license by the Bureau of Industry and Security (BIS), U.S. Department of Commerce. Consult the BIS, the EAR, and/or Owen Compliance Services, Inc. to determine licensing requirements for export or re-export of this technology.

This document contains Confidential Information of Owen Oil Tools LP (Owen) and is furnished to the customer for information purposes only. This document must not be reproduced in any way whatsoever, in part or in whole, or distributed outside the customer organization, without first obtaining the express written authorization of Owen. Pressure Activated Firing Head - HP

Pressure Activated Firing Head (HP)

Description

The Pressure Activated Firing Head (HP) was developed for use where pressure firing is required, including horizontal wells, well stimulation or as a backup firing system. These tools utilize our precision shear pin technology with an accuracy of +/- 5%. This low pressure system can be set to activate at predetermined pressures ranging from 2,000 psi to 25,000 psi, by utilizing two sizes of precision shears.

Features and Benefits

- Utilized with any of Owen TCP Firing Head Top Sub or an Automatic Release Firing Head
- Used with Owen Time Delay Fuses
- Can be placed top or bottom of all Owen TCP Guns
- Well Suited for highly deviated wells
- Can be run on Coil Tubing
- Can be run on Slick Line or Electric Line
- Requires 2,000 psi minimum to fire (Safe at surface - API RP-67)

Specifications

O.D.	1.69"	43 mm
Make-up Length	4.75"	121 mm
Max. Temperature ¹	250°F (121°C)	
Max. Hydrostatic	25,000 psi	172.3 MPa
Min. Hydrostatic	2,000 psi	13.8 MPa

¹The maximum temperature can be increased to 450°F (230°C) by substituting the 90 durometer Nitrile o-rings with 90 durometer Viton O-rings. Refer to the Time vs Temperature chart for Explosives to confirm any explosives requirements.

Warning: *The assembly of this tool requires the handling of an Explosive Device and all safety precautions must be adhered to and observed!*

Caution: *The shear pin values shown on the package accompanying this tool are valid ONLY for the tools listed in this manual!*

Caution: *Correct shear pin values will vary between lot dates, always reference the data accompanying the pins!*

Note: *Check all items against the parts list to be sure of having the correct parts and quantities.*

Note: *Check for any damage to the parts which would prevent the part from being assembled correctly, easily and safely.*

1.0 Assembly

1.1 Install the O-rings (item #8) and Back-up rings (item #11) on the Piston (item #2). Apply one drop of Blue Loctite® on the threads of the Firing Pin (item #10). Thread Firing Pin into the Piston and tighten. Be careful not to mar the surface of the Shear Pin holes.

Pressure Activated Firing Head - HP

1.2 Slide the Shear Ring (item #3) over the Piston. Line up the alignment marks and numbers on the ring and Piston. This will align the holes that were matched drilled.

1.3 Insert the correct size and quantity of pins as per your job requirements (refer to the Pinning Procedures and Temperature Correction Charts). Owen recommends equally spacing the Shear Pins in ring and applying a small amount of grease to help retain pins.

1.4 Apply grease to O-rings on the Piston and insert the assembly into the Piston Housing (item #6) until the Shear Ring is flush with the housing.

1.5 Apply grease to threads of the Piston Housing, then thread on the Retainer Cap (item #7) and tighten. Install the O-rings (item #9) and the Back-up rings (item 1#2) on the Piston Housing. The Pressure Activated Firing Head is now complete.

2.0 Imperial Pinning Calculations

Step 1 (Data)

- A. Well Temperature (BHT) at perforating depth _____ °F
- B. True Vertical Depth (TVD) _____ ft
- C. Max. fluid weight in well when tripping _____ ppg (lb/gal)
- D. Fluid Weight in tubing when ready to fire _____ ppg (lb/gal)

Step 2 (Calculate Pressures)

- A. Max. Hydrostatic at depth
 $(0.05195 * 1C * 1B) = \text{_____ psi}$
- B. Tubing hydrostatic when ready to fire
 $(0.05195 * 1B * 1D) = \text{_____ psi}$
- C. Greater of 2A or 2B = _____ psi
- D. Absolute Firing Pressure
 $(2C + 2000 \text{ psi (minimum safety factor)}) = \text{_____ psi}$

Pressure Activated Firing Head - HP

Step 3 (Calculate number of pins)

A. Reduction Factor

Refer to the Temperature Correction Chart with the temperature from 1A = ____

B. Adjusted Large Pin rating (.130 dia.)

(____ psi * 3A) = _____ psi / pin @ BHT

Refer to the pin shipping bag for listed pin value to use.

C. Adjusted Small Pin rating (.100 dia.)

(____ psi * 3A) = _____ psi / pin @ BHT

Refer to the pin shipping bag for listed pin value to use.

D. Number of Large Pins

$(2D / 3B) =$ _____

A. Number of Small Pins = _____

Take fractional amount of 3D and determine if one small pin is required (for example 11.5 pins 11 large + 1 small).

Step 4 (Calculate nominal absolute firing pressure)

A. $3D \times 3B =$ _____ Large pin psi @ BHT

B. $3E \times 3C =$ _____ Small pin psi @ BHT

C. $4A + 4B =$ _____ Total absolute pressure @ BHT

Step 5 (Calculate pressure tolerance)

A. Tolerance ($4C \times 0.05$) = _____ psi

Step 6 (Calculate surface pressure) - Pressure applied on tubing.

A. Nominal pressure ($4C - 2B$) = _____ psi

B. Max. pressure (6A + 5A) = _____ psi

C. Min. pressure (6A - 5A) = _____ psi

3.0 Metric Pinning Calculations

Step 1 (Data)

A. Well Temperature (BHT) at perforating depth _____ °C

B. True Vertical Depth (TVD) _____ m

C. Max. fluid weight in well when tripping _____ kg/m³

D. Fluid Weight in tubing when ready to fire _____ kg/m³

Step 2 (Calculate Pressures)

A. Max. Hydrostatic at depth

$$(0.0098 * 1C * 1B) = \text{_____ kPa}$$

B. Tubing hydrostatic when ready to fire

$$(0.0098 * 1B * 1D) = \text{_____ kPa}$$

C. Greater of 2A or 2B = _____ kPa

D. Absolute Firing Pressure

$$(2C + 13790 \text{ kPa (minimum safety factor)}) = \text{_____ kPa}$$

Step 3 (Calculate number of pins)

A. Reduction Factor

Refer to the Temperature Correction Chart with temperature from 1A) = _____

B. Adjusted Large Pin rating (.130 dia.)

$$(\text{_____ kPa} * 3A) = \text{_____ kPa / pin @ BHT}$$

Pressure Activated Firing Head - HP

Refer to the pin shipping bag for listed pin value to use.

C. Adjusted Small Pin rating (.100 dia.)

$$(\text{_____ kPa} * 3A) = \text{_____ kPa / pin @ BHT}$$

Refer to the pin shipping bag for listed pin value to use.

D. Number of Large Pins

$$(2D / 3B) = \text{_____}$$

E. Number of Small Pins = _____

Take fractional amount of 3D and determine if one small pin is required (for example 11.5 pins 11 large + 1 small).

Step 4 (Calculate nominal absolute firing pressure)

A. $3D \times 3B = \text{_____}$ Large pin kPa @ BHT

B. $3E \times 3C = \text{_____}$ Small pin kPa @ BHT

C. $4A + 4B = \text{_____}$ Total absolute pressure @ BHT

Step 5 (Calculate pressure tolerance)

A. Tolerance ($4C * 0.05$) = _____ kPa

Step 6 (Calculate surface pressure) - Pressure applied on tubing.

A. Nominal pressure ($4C - 2B$) = _____ kPa

B. Max. pressure ($6A + 5A$) = _____ kPa

C. Min. pressure ($6A - 5A$) = _____ kPa
