

## PRODUCT INFORMATION:

### DESCRIPTION:

The Coiled Tubing Plug and Shoot system is used in conjunction with the HTD-BLAST® System (TC-044-XXXX-000) to set a bridge plug and perforate in one run into the wellbore. The system is attached to the bottom of the last perforating gun of the HTD-BLAST® System. Pressure is applied to the wellbore which initiates Owen's Pressure Activated Firing Head (TC-020-1688-000). The power charge in the setting tool is ignited upon detonation. After the bridge plug is set, the HTD-BLAST® System is activated using a Ball Activated Differential Safety Firing Head (TC-022-2375-000/200 or TC-031-2750-000/200).

### ADVANTAGES:

- Allows a bridge plug and perforating guns to be run in one trip
- Run with Owen's reliable HTD-BLAST® System
- Uses Owen's proven and reliable TCP firing heads
- Separate firing heads for setting of bridge plug and initiating HTD-BLAST® perforating system

### APPLICATIONS:

- After frac screen out and injection rate is not sufficient to pump wireline guns down to set plug and perforate next stage
- Wet Shoe or mechanical sleeve/valve failure and injection rate is not sufficient to pump wireline guns down to set plug and perforate next stage
- Well configurations or restrictions create too much friction to pump wireline guns down to set plug and perforate
