Predict-K "Tip of the Month"

We at Stim-Lab would like to introduce "Predict-K Tip of the Month" to help our proppant consortium members get the most out of Predict-K.

Each month, we will highlight a feature or application of Predict-K.

- How Predict-K can be used in completion and reservoir engineering studies
- How to more efficiently use Predict-K
- Introduce less frequently used Predict-K features

Since this is the first tip, this month will cover a fairly simple feature in Predict-K:

Zooming in and out on graphs

Sometimes users forget that you can do this because there are no buttons on the screen for zooming.

Zoom In

Left click on your screen above and to the left of your zoom target. Then while holding down the left mouse button drag a box around the target area moving down and right.

Zoom Out

Left click and hold on any portion of the graph and drag the mouse towards the top left corner of your screen.

If you accidentally right click instead, you will drag the plot up and down or side to side.

The tips will be emailed so they can easily be forwarded to others that may not be on the email distribution list. We hope you will enjoy these tips and find them useful, but if you would like to be removed from this list please click the Unsubscribe link below. A new email will be created using your default email client. If the link does not work for you simply reply to this email with 'Unsubscribe' in the subject line and you will be removed from the list. If this email was forwarded to you and you would like to be added to the distribution list, please forward this email to Chris.Williams@corelab.com with 'Subscribe' in the subject line.
