### General Features

Our Reservoir Fluid PVT Analysis System composed of one set of PVT instrument (PVT 500/1500 full visual 500cc) and some ancillary equipment, as gasmeter, HP pressure sample cylinders, viscometer, etc. is able to perform analysis of different GOR reservoir fluids as crude oil, volatile oil, gas condensate and gas under high pressure and temperature conditions.

This system can process the comprehensive evaluation for oil and gas reservoirs.

## Measurements

The PVT 500/1500 with accessories is designed to perform:

- A complete PVT study on oil and volatile oil GOR < 800 Sm<sup>3</sup>/m<sup>3</sup> conducted in 4 stages:
  - Constant Composition Expansion (i.e. CCE) at constant temperature,
  - - Differential vaporization at constant temperature,
  - - Separation tests (several stages at different temperatures)
  - - Viscosity measurement
- A complete PVT study on gas condensate with high GOR conducted in 2 stages:
  - - Constant mass depletion (i.e. CMD)
  - - Constant volume depletion (i.e. CVD),
- A recombination of separator oil or condensate and separator gas under reservoir conditions
- An analysis of viscosity, density, composition (accessories in option)
- Z factor determination
- Dew point determination by IR
